	Applicant/Applicant's Representat	tive Signature – if appropriate)

Continuation of Substance of Interview including description of the general nature of what was discussed: The examiner noted that the phrase "...in or on an area of an upper side of the support cage that faces the deflector" at the end of claim 27 is a broad limitation which allows the brush holder location to be interpretted as being near the upper end (Bass) of the cage, radiially within the upper end of the cage (Carter et al) and also in the deflector (Beardslee). The examiner and the applicant agreed that the changes as set forth in the examiner's amendment read over the prior art by limiting the brush holders to be "disposed in or on an upper surface of the support cage". Additionally various and plural changes were discussed and agreed to relating to creating consistant terminology for the brush holder connector pins and the stator pack connectors. Lastly, various minor typographical errors where agreed to be corrected as set forth in the examiner's amendment.
